

ToxicWave 2

"Making the impossible easy..."

Program: Hybrid Wave 2

The ToxicWave mixes up a surfboard "based" outline with the advantages of a twin tip stance. You can ride the tail backwards in order to go through the line up, but you will ride on a full rounded, true rail and lifted nose. A perfect balance for onshore conditions!

Now the classic ToxicWave shape in collection for the 4th year (!!!) has a new version called ToxicWave 2, built in a different technology, and a completely new outline and rocker line, more suitable for lighter winds and smaller surf. A solid sign of proven performance with a new concept.

Technology: Wood/Biaxial/ABS rails/ DC/ DC.
