

RRD VISION

"Superior versatility, exceptionally balanced"

Sizes: 12-10.5-9-7-5

Program: All Terrain

The VISION Kite is amazing fun and accessible from the minute you hit the water. Easy turns with super smooth power and acceleration. Perfect handling in gusty conditions, water re-launchable on the spot! Usable by the largest variety of kites in the water today, there are no limits for the riders progression with the Vision Kite in any conditions.

Features

- The 3 strut design of the VISION allows a simple body structure, helped by the relatively closed design of the leading edge, to perfectly position the kite in the wind window, never too far forward or back, just right where it needs to be to let you feel safe and in control.
- Medium/light bar pressure with very easy manoeuvrability, the Vision kite can be easily powered up, not only by its natural ground power but also by its manoeuvrability.
- By swinging the kite top to bottom in quick motion, the power you are able to generate is remarkable, yet smooth and easy to control.
- The kite body is lightweight and the bridle is short and never gets in a tangle.
- The kite is supplied with the Global V3 bar.

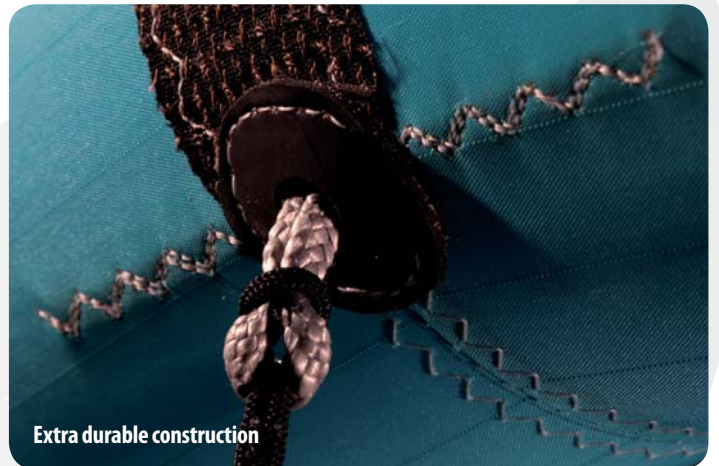

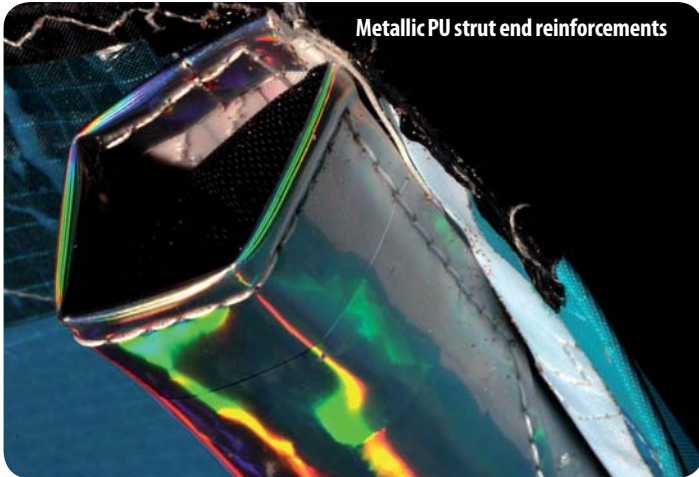

Technology of construction

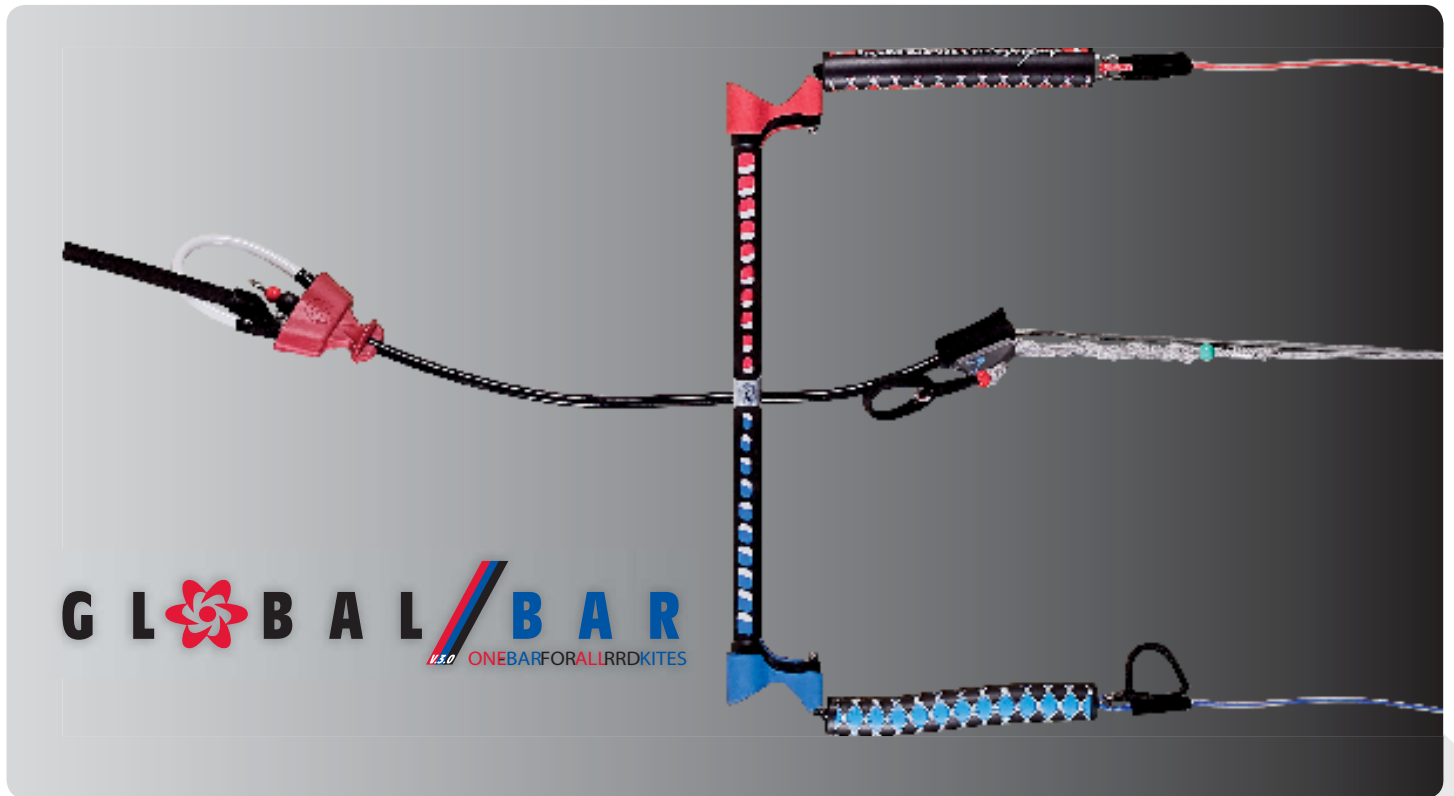

- LE Parallel seams for maximum strength and lower stretching.
- Full Dacron wingtips
- Metallic PU strut end reinforcements
- DP 175 LL Dacron
- Tejin T9600 Canopy

BAR

The new GLOBAL bar is composed of 5 pieces:

- 2 x New side dual density endcaps with soft ends for easy line rolling and a new quick trim for to adjust the bar length. The **end cups** are moulded with duo density plastic to allow lightweight on the sides and also offer comfort for the hands while kiteboarding.
- 2 x narrower diameter carbon bar tubes to improve grip potential and reduce hand fatigue.
- 1 x middle alu cast and polished integrated piece for de-power rope movement. The **aluminium forged centre piece** has a big hole and high angle of the side walls allowing less friction on the spectra depower rope.

INCORPORATED SAFETY LINE

A great innovation in terms of safety by keeping the de power rope clean and protected. Both the de power rope and the safety line are running inside a dual chamber tube that hides these two basic lines. No more tangling around, it's all clean and safe now!

DE-POWER ELASTIC TRIM

In order to avoid the problem of having the excess of the de-power trim rope hanging around, and possibly going to disturb you while kiting, we have added an elastic bungee inside the spectra rope that allows you to reduce the excess rope and shorten it until 50% of the stretched length. Same functionality, no rope on your way!

QUICK RELEASE INTEGRATED CHICKEN LOOP

A completely new design for this moulded chicken loop part. Ergonomically conceived, it is compact and complete of all features, clean and precise. Very easy to be released and re-mounted with one hand!

RIGID THREAD FLYING LINES

An exclusive product developed and manufactured in Italy exclusively for RRD. This new revolutionary lines are made with: an inner uninterrupted unidirectional pure dyneema fibers, covered by a pure dyneema 30° woven fabrics. The combination of these two styles of weaving the fabrics allow to obtain an unmatched low stretch factor of the lines reduced by 85% compared to the classic flying lines. The Rigid Thread lines allow the kite to be faster in the turns, to quicker transfer the power of the kite to the board resulting in more response and better handling of the kite in any conditions. The reduced stretching factor of these lines will allow a perfect trim of your kite in the time without the need to re-adjust your front lines! No stretch, better kiteboarding!
